At its core, EMS Toolkit is a corporate intranet specifically designed and tailored for the EMS Provider. It is a web based EMS software solution created to increase efficiency and productivity throughout your entire organization. Finally there is a system that EMS agencies across the nation have been waiting for, with nearly 100 integrated features, staff members from the executive management level to field staff can benefit from this EMS Intranet web based software.

Essentially, EMS Toolkit is comprised of four basic areas. First is a **Powerful Web-Based EMS Intranet** that allows information to flow from staff to management and back to staff. Second is our powerful CAD integration option that allows EMS Toolkit to create **Custom Dashboards** that meet every business demand you have. Third the **Custom EMS Reporting** service. Again using the CAD Integration option our developers can create astounding custom reports that showcase data you might have thought wasn't possible. Lastly is the **Custom Development** that EMS Toolkit offers. Our developers can create nearly any "add-on" that your agency will need to make the entire EMS Toolkit system perfect for your agency.

With these four elements working together in a single, unified environment the collaboration possibilities really are endless!

Click Here to download our easy print brochure that outlines just some of the EMS Toolkit features.
